become a better informed trader with Hidden Force Flux

Rules to follow when using algorithmic volume and/or localized delta divergences to support your trading decisions. It is obvious that discretion may be applied to any of these, but in general it is advisable that they be followed.

Fading a move (local counter-trend trading):

1. **Do NOT** enter a long position near a local low BELOW a price which had a positive algorithmic bid volume. Similarly, **do NOT** enter a long position near a local low BELOW a price where localized short delta divergence occurred (red dot on the price/delta graph).

2. **Do NOT** enter a short position near a local high ABOVE a price which had a positive algorithmic ask volume. Similarly, **do NOT** enter a short position near a local high ABOVE a price where localized long delta divergence occurred (green dot on the price/delta graph).

Following a move (local with-trend trading):

1. **Do NOT** enter a short position near a local low ABOVE a price which had a positive algorithmic bid volume. Similarly, **do NOT** enter a short position near a local low ABOVE a price where localized short delta divergence occurred (red dot on the price/delta graph).

2. **Do NOT** enter a long position near a local high BELOW a price which had a positive algorithmic ask volume. Similarly, **do NOT** enter a long position near a local high BELOW a price where localized long delta divergence occurred (green dot on the price/delta graph).
